

# LOAD RESISTOR

INSTALLATION INSTRUCTIONS

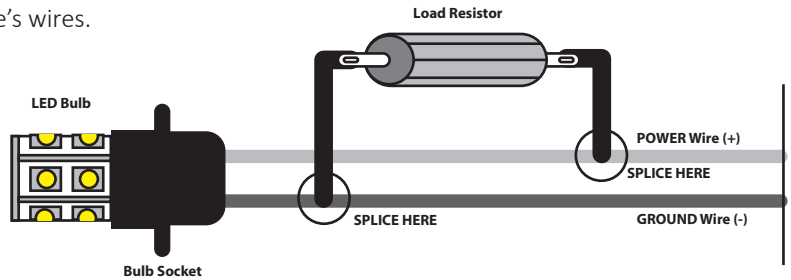

**WARNING:** Load Resistors will get **HOT!**  
**DO NOT** Install on/near painted surfaces or plastic!

## How many load resistors are needed?

Use one resistor per LED turn signal bulb.

## One POWER Wire Installation:

1. Splice the load resistor's wires in so that it connects across the positive and negative wires of the vehicle's turn signal bulb wiring.
2. Use pliers to close splice taps, do not cut your vehicle's wires.
3. Keep load resistor away from wirings.

## Two POWER Wire Installation:

1. You will need to isolate the turn signal wires from the load resistors to work properly.
2. Use voltage meter to determine the power and ground wires.
